

Using Chrome on iOS

If Students and Faculty are experiencing issues accessing eReserve Plus resources via their Learning Management System using Chrome on an iOS, we recommend using the native browser on iOS (Safari). This is due to alternative browsers like Chrome on iOS being limited in functionality (e.g. iOS Chrome is a cut-down version of Apple Safari as imposed by Apple). In particular they do not support session cookies required for displaying resource lists and resource links on LMS pages. However, these session cookies are supported in full when using Apple Safari for iOS.
